

## Exclusions deductible

Some care is free of the deductible. In most cases you will not receive an invoice for the reimbursements below from the basic insurance.

- Visit to the general practitioner and out-of-hours GP (with deductible for treatments or examinations outsourced by the general practitioner, such as laboratory tests)
- Care for children under the age of 18
- Borrowed resources
- Nursing and care in your own environment (district nursing)
- Chain care via the general practitioner
- Travel costs and follow-up checks of organ donors
- Childbirth and obstetric care (for medicines, blood pressure tests, chorionic villus sampling or patient transport)
- Maternity care
- Donor follow-up
- Transport costs of a donor if these costs are reimbursed through their own insurance
- Combined lifestyle interventions

Do you use prescription medicines chronically? And do you have a medication assessment once a year at a contracted pharmacy? Then you do not pay any deductible for the medication assessment.

### **Sometimes you get a bill**

Follow-up examinations are sometimes necessary during maternity care or after a visit to the general practitioner. For example for blood tests. You pay your own risk on this. You will then see laboratory costs on your declaration overview. These costs are not covered by the reimbursement of general practitioner care or maternity care
